The Leisure Center project is located within a cultural and sports facilities complex. A circular principle encloses the block ring around the stadium whilst maintaining transparency from the adjoining urban space through the buildings towards the stadium.

Although their programs are quite distinct, the two buildings have similar design attributes:

- convivial facilities – club reception and lodges are oriented towards the stadium;
- each building has a view overlooking the site.

The « events » building is the main

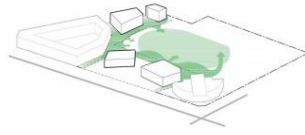

component of the Leisure Center. As such, to have its rightful place, a huge area was cleared to create a 145 x 45m square. Sited by pivoting its two auditoriums, the movement is volumetrically asserted on the city side as an invitation to the festivities. Next to the stadium, the building acts as one so as not to disrupt the calm within the block and to reinforce the physical boundary of the playing fields.
